

OUTPUT 1 - Morphological Processing for Search Engine Indexing

```
-----  
Original Word : analyzing  
Root Word    : analyze  
Affix        : -ing  
Type         : Inflectional  
Normalized   : analyze  
-----  
Original Word : analysis  
Root Word    : analyze  
Affix        : -sis  
Type         : Derivational  
Normalized   : analyze  
-----  
Original Word : analytical  
Root Word    : analyze  
Affix        : -ical  
Type         : Derivational  
Normalized   : analyze
```

OUTPUT 2 - Morphological Parsing for Sentiment Analysis

```
Original : disagree  
Prefix   : dis  
Root     : agree  
Suffix   : None  
Category : Prefix Derivation  
Meaning  : Negative  
Normalized : agree  
-----  
Original : agreement  
Prefix   : None  
Root     : agree  
Suffix   : ment  
Category : Suffix Derivation  
Meaning  : Noun Formation  
Normalized : agree  
-----  
Original : agreeable  
Prefix   : None  
Root     : agree  
Suffix   : able  
Category : Suffix Derivation  
Meaning  : Adjective Formation  
Normalized : agree
```

OUTPUT 3 - Morphology based normalization for Topic Modeling

```
-----  
Original Word : govern  
Root Word    : govern  
Suffix       : None  
Hierarchy    : Base Word  
Normalized   : govern  
-----  
Original Word : government  
Root Word    : govern  
Suffix       : -ment  
Hierarchy    : Level 1 Derivation  
Normalized   : govern  
-----  
Original Word : governance  
Root Word    : govern  
Suffix       : -ance  
Hierarchy    : Level 1 Derivation  
Normalized   : govern
```

OUTPUT 4 - Morphological Parsing for Document Classification

```
-----  
Original : activate  
Prefix   : None  
Root     : activate  
Suffix   : None  
Sequence : Base Word  
Normalized : activate  
-----  
Original : activation  
Prefix   : None  
Root     : activate  
Suffix   : -ion  
Sequence : activate + ion  
Normalized : activate  
-----  
Original : reactivation  
Prefix   : re  
Root     : activate  
Suffix   : -ion  
Sequence : re + activate + ion  
Normalized : activate
```

OUTPUT 5 - Inflectional Morphology based Normalization

```
-----  
Original : create  
Suffix   : None  
Feature  : Base Form  
Root     : create  
Normalized : create  
-----  
Original : creates  
Suffix   : -s  
Feature  : Third Person Singular  
Root     : create  
Normalized : create  
-----  
Original : creating  
Suffix   : -ing  
Feature  : Present Participle  
Root     : create  
Normalized : create
```
